## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

I. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Dietle et al., US No. 5,823,541.

Dietle discloses a seal comprising a housing (13) having a generally cylindrical surface (@13). There are first and second internal annular grooves (21,23) spaced longitudinally of and encircling the internal surface (FIG. 1).

There are inlet and outlet ports (31,33). The housing has a generally cylindrical external surface (@13). The cylindrical internal surface of the housing is enlarged (@ the outer surface of 17) radially outward in the area of the annular chamber as compared with the diameter of the surface outwardly of the grooves.

Examiner's Note: Applicant has not positively claimed the rotary shaft, o-rings, and pump. If Applicant wishes for the Examiner to give these components patentable weight, Examiner suggest claiming the "seal assembly", because Applicant has not done so the claims are being examined as they pertain to the subcombination of the seal and not the entire arrangement.
